

Andersen Company is Greeting You.

Your professional solution provider in the sphere of Information Technologies

Welcome to Andersen

Dear Sirs!

Andersen — is a team of professionals, who cooperate together in order to provide high quality service to a big circle of modern companies.

The team-members of Andersen have great work experience in the largest finance, consulting and IT companies.

We can solve such tasks as:

- implementation of enterprise information systems;
- high-tech software development;
- maintenance and support of our customers' IT-infrastructure;
- consulting in the sphere of integration and usage of the software.

Khomich Alex
General director
of Andersen company

A handwritten signature in black ink, appearing to read "Khomich A. U." with a stylized initial.

Our policy during the production process is maximum attention to the customer and maximum attention to his problems. We want our customers to come back to us again and again, setting more new and complicates tasks for us.

About the company

Work experience

Since the foundation of the company in 2007, the team-members have implemented more than 20 projects for Russian, American and European clients – large corporations, state and international companies, representatives of small and medium-sized businesses.

Quality

Andersen is characterized by a high quality of the software, thanks to the usage of advanced manufacturing in the sphere of quality control. Our quality control system corresponds to the international standard ISO 9001:2000.

Location

Sales office is located in Moscow.
Head office of the Software development is situated in Belarus, Minsk.

Technologies

Microsoft technology – is the main base of Andersen product development. Our projects are developed on:

- Microsoft .NET Framework, C#, VB, C++;
- ASP .NET;
- Microsoft SQL Server 2000-2005;
- Microsoft Share Point.

All the programmers have Microsoft certificates.

While working on the projects devoted to the Information System integration we often have to work with Oracle technologies, build interfaces and reports for Oracle databases.

If there is a need during a big project, to share customers data in internet, so we do this on:

- PHP;
- MySQL;
- Oracle (as a Data level);
- HTML, Java Scripts (Other programming technologies for internet).

Our clients

Typical project

Andersen provides the whole cycle of services during the development, integration and re-engineering of the software systems.

We stick to the concept of partner relations when the client receives a totally controlled and transparent process of the product development.

While working on the problem we are oriented at the solving of the specific business-tasks of the client, choosing the best technologies for this specific project.

The ordinal project consists of next steps:

- Negotiations, we try with customer to determine the scope of future project;
- Contracting;
- Setting technical task;
- Architectural design of the software;
- Programming;
- Testing;
- Implementation of the project. Moving to the client office and tuning, testing, explaining different features of software;
- Supporting.

Our clients about us.

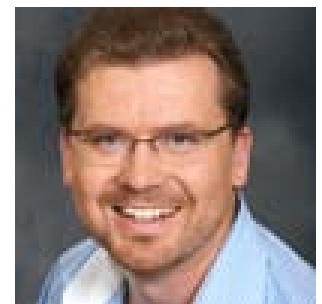

“Our company works with Andersen for more than a year. Office work automation in our company was implemented by specialists of Andersen company. I would like to draw attention to the fact that qualitative and rapid support is being delivered by the specialists of the company. It allows us to outsource a larger number of IT functions”.

Dmitrova T.
Chief Executive officer “Banko-Eurasia”

“Andersen is a company that implements and supports a CRM system of our organization. Decision to run this project with Andersen was taken after very precise and detailed investigation of our business.

Andersen shows itself not only as a software company, but mostly as a system integrator that could manage different business situations”.

Merkulov I.
Chief Executive officer “PIR Group”

Team

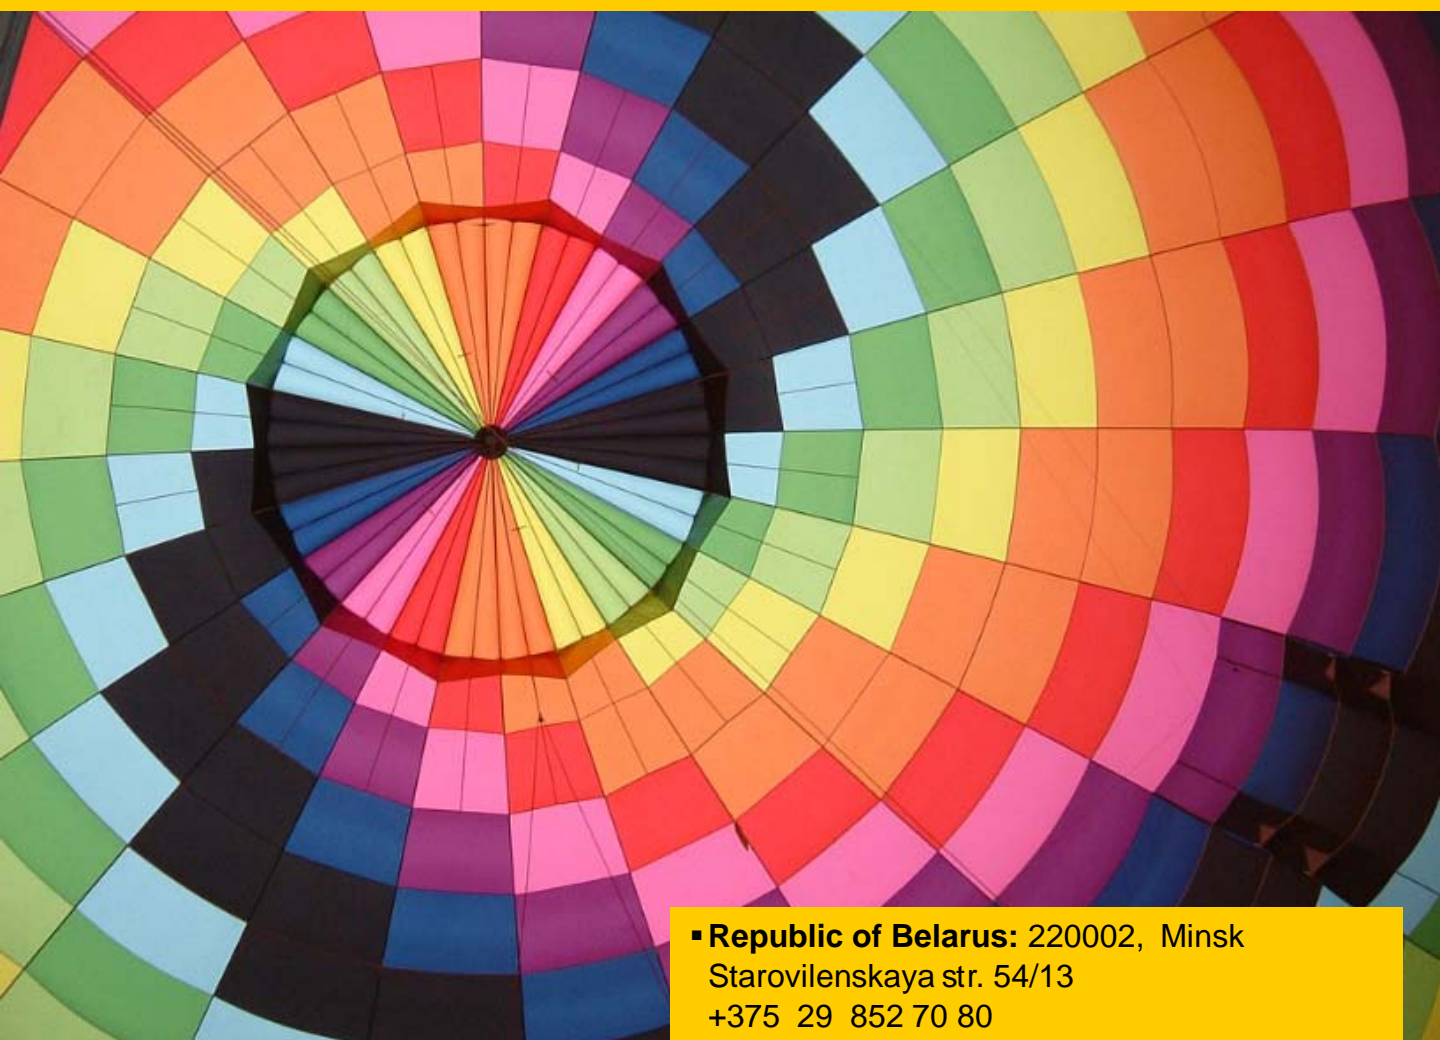

At the moment the staff of the company comprises 20 programmers and 3 people of management personnel
